WHITE PAPER · MBT55 · 2025

Comprehensive Overview of **Climate Change** and the Scientific & Applied Potential of MBT55

Microbial BioTransformation 55 — Reconnecting Nature's Metabolic Systems

Ch.1 Earth System Crisis & Introduction
Ch.2 Carbon Cycle Reconstruction
Ch.3 MBT Sustainable Cycle Model
Ch.4 Impact Evaluation
Ch.5 Policy Proposals & Roadmap

Earth System Crisis & Redefining Circular Structures

The "Metabolic Crisis"

Climate change, soil degradation, food security, and health disparities must be understood as one integrated crisis — not separate issues.

MBT55 Solution

Reconnects carbon, nitrogen, phosphorus & water cycles as an Ecological Hyper-cycle — restoring the biosphere's self-repair capabilities.

Scientific Reconnection

Reconstruct electron, elemental & metabolic pathways

Social Reconnection

Integrate agriculture, waste, health & education

Economic Reconnection

Simultaneous carbon credits creation & cost reduction

10% of global GHG emissions from waste & food loss **9.7B** global population projected by 2050

MBT55 Microbial Consortium & Carbon Cycle Reconstruction

Aerobic 55%	Anaerobic 45%

Mimics the natural redox balance of soil ecosystems

Starch Decomposers

B. subtilis
Paenibacillus

Protein Decomposers

Pseudomonas
B. licheniformis

Cellulose Decomposers

Cellulomonas
Streptomyces

N-Fixing Bacteria

Azotobacter
Rhizobium

M³-BioSynergy System (M-Cube BioSynergy System)

01 **Microbial Symbiotic Network**

Collaborative relationship formed by 120 species

02 **Nutrient Cascade**

Substrates decomposed in stages

03 **Ecological Hyper-cycle**

Self-circulating dynamic equilibrium

Key Equations: Electron Flow & SOC Formation Model

Carbon Fixation Ratio

$$Cf = \lambda \times Ed / (Ed + Km)$$

λ = max fixation rate | Ed = electron donor generation efficiency | Km = electron saturation constant

SOC Formation Model (Differential Equation)

$$dCs/dt = I - kd \cdot Cs + fm(MBT55) \cdot \eta$$

Cs = soil organic carbon (t-C/ha) | fm(MBT55) = carbon stabilization function (0–1) | η = electron re-fixation efficiency (0.2–0.8)

1.8–2.6× increase in SOC accumulation rate vs. conventional compost

Optimal: C/N ratio 20–25 | Soil pH 6.5–7.2

MBT Sustainable Cycle — Eco-Economic System

Complete fermentation & decomposition in **24 hours** — generating useful metabolites for multiple applications

🌱 **Biophysical Cycle**	Waste → Decomposition → Regenerated Resources → Agriculture / Energy
💡 **Bio-Informatic Cycle**	Azure AI integration · Distributed data assimilation · Bio-Knowledge Graph
💰 **Eco-Financial Cycle**	Carbon credits · Green premiums · Regenerated fertilizer value quantification

OUTPUT MATERIALS: Functional Compost · Fermented Fertilizer · Probiotics · Functional Feed · Medical Materials

Multi-Dimensional Impact Evaluation

+116%
SOC Formation Rate
vs. conventional

+100%
CO_2 Absorption Equivalent
1.2 → 2.4 t/ha/yr

+21%
Soil Water Retention
Improved fertility

Top 2%
UN FAO Regen. Agriculture
Global benchmark

SOCIAL & ECONOMIC IMPACT

+32-48%	**Health Improvement** Intestinal environment improvement via MBT-derived probiotics	**820/yr**	**Employment Creation** Per pilot district in Kenya (42% women & youth)
$120/yr	**Medical Cost Reduction** Per person estimated savings in target regions	**+2.8%**	**GDP Contribution** Regional gross product including multiplier effect

Sustainability Index (SI): **0.84 / 1.0** vs. International SDG average: 0.63

Global Implementation Roadmap — 5 Phases (2025–2050)

1	2	3	4	5
2025–26	2026–28	2028–30	2030–35	2035–50
Scientific Foundation	**Pilot: Kenya, Rwanda, India**	**Int'l Standardization**	**AI Management Network**	**Global Expansion**
SOC coefficient ±0.03 2+ carbon market registrations	20,000 ha · 84,000 t-CO_2 5,000 jobs	Carbon Loop Bond certified 4.5–6% yield	Earth Microbial Brain 98%+ platform uptime	100M t-CO_2/yr 50+ countries

"From Net Zero to Bio-Positive"

MBT Sustainable Cycle = Microbial Intelligence × Social Intelligence × Artificial Intelligence

Carbon Negative + Health Positive Society by 2050

MBT55

A Path to a *"Civilization That Circulates Life"*

🌍 Carbon Negative — 100 million t-CO_2/year removed by 2050

❤️ Health Positive — Global disease prevention via gut microbiome data

💹 Circular Economy — Carbon Loop Bonds · Green premiums · Life Activity Credits
